

This is how to send a Peer-to-Peer message:

1. COMPOSE AND POST THE P2P MESSAGE

- a) In the top line **From:**<your call sign> **Send as:** Peer-to-Peer Message. ■
Do this *first* so you don't forget later.
- b) Enter the destination call sign **To:**<destination call sign>. ■
- c) Enter the **Subject** and content as you see fit - make a joke or limerick if nothing else, or **Select a template** like a weather report.
- d) **Post** it to the Outbox. ■

2. OPEN A Vara FM P2P SESSION AND SEND THE MESSAGE

- a) Open a **Vara FM P2P** session. ■
- b) On the **Connection:** line
select **Digipeater** ■ <destination call sign> ■ **via** <the local digipeater> ■

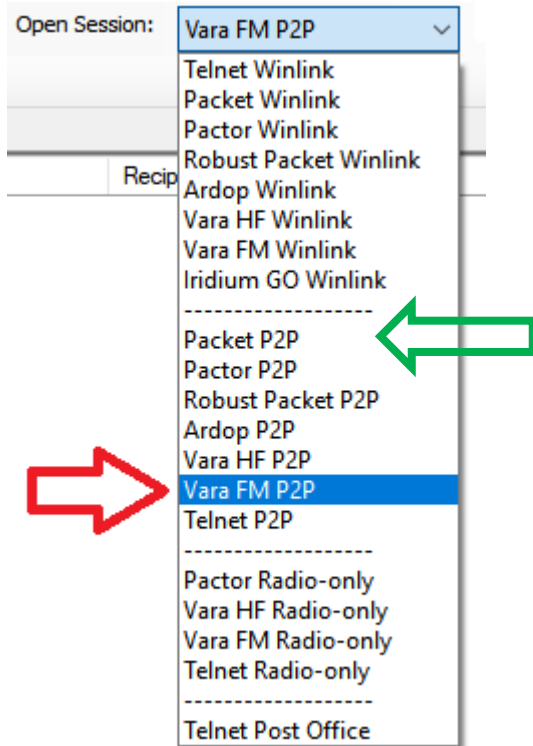

- c) Click on **Start** ■

Remember:

You must enter the destination call sign in two places, - the message and the session
Select Digipeater and give its call sign following "via"

Flip over (next page) to see where the **Vara FM P2P** session is located.

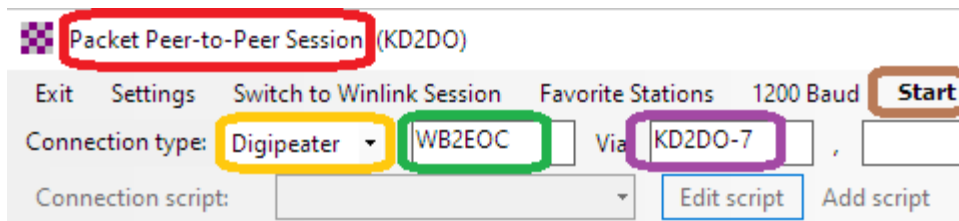

Or to send using **Packet P2P** instead of VARA. This will use SoundModem by UZ7HO instead of VARA

3. OPEN A Packet P2P SESSION AND SEND THE MESSAGE

a) Open a **Packet P2P** session. Find it at the green arrow above.

b) On the **Connection:** line
 select **Digipeater** <destination call sign> **via** <the local digipeater>
 Notice that the packet has a different dash number (7 instead of 10)

c) Click on **Start**

No license and therefore no money is needed to operate Packet - either Email or P2P
